

PRODUCT SHEET

## Microsoft 365

Microsoft 365 combines Office 365, Enterprise Mobility + Security (EMS) and Windows 10 into one package, giving you the latest applications and enterprise-level security tools to work effectively and securely.

### Overview

Microsoft 365 combines Office 365, Windows 10 and Enterprise Mobility + Security (EMS). It is available in three different packages; Business, E3 and E5, which provide different levels of features and functionality across these solutions. Microsoft 365 gives organisations access to a range of powerful productivity and security solutions and at a more cost effective price than purchasing these products separately.

### Why Microsoft 365?

We recommend Microsoft 365 for a number of reasons:

**Great value** - Save up to 25% in licensing costs compared to purchasing Office 365, Windows and EMS separately. Many organisations are already paying for Office 365 and upgrading to Microsoft 365 gives you a whole range of additional features and benefits - particularly around security.

**Enhanced security** - Office 365 comes with a range of security features but EMS brings a much wider range of powerful security tools that are suitable for everyone from small businesses to the largest enterprises. Combined with the new security features of Windows 10, Microsoft 365 provides an effective and well-rounded solution for a very robust security setup. Ahead of upcoming GDPR legislation and following recent publicised security breaches, cybersecurity should be a top priority and Microsoft 365 gives you the tools required to implement and manage a secure IT estate.

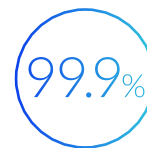

**Simple to manage** - Combining all these apps and tools into one fixed monthly cost provides simple budget management and gives you all the tools to run your organisation without having to manage multiple solutions and applications.

**Regular roadmap updates** - Microsoft heavily invest in their products and you can keep track of the upcoming roadmap for complete visibility. This investment ensures that you will be using progressive software and automatically gives you the latest updates.

### KEY INFORMATION

financially-backed guaranteed uptime from Microsoft

savings when buying Microsoft 365 over separate products

### WHAT'S INCLUDED

Office 365

Enterprise Mobility + Security

Windows 10

### HOW WE CAN HELP

- Microsoft Licensing
- Migration & Implementation
- IT Consultancy
- Cybersecurity services
- Cyber Essentials certification
- ISO27001 certification
- IT Strategy & Roadmap
- Ongoing support
- Training

## Microsoft 365 Security Features

Cyber security should be a priority for all businesses. The frequency and magnitude of cyber-attacks is increasing year on year, with businesses of all sizes being targeted. EMS as part of Microsoft 365 gives you access to a wide range of security tools and features to keep your organisation protected.

### OUR ACCREDITATIONS

### KEY FEATURES

#### Multi-factor Authentication (MFA)

Multi-factor authentication is a simple yet effective solution, which adds a second layer of security to user sign-ins to reduce identity theft. Office 365 MFA allows you to set up MFA for your users, choosing either mobile app, phone call or SMS text as the second factor. Combined with EMS, you can set up conditional access features, to create specific conditions when MFA is (or is not) requested. For example, setting a rule to never ask for MFA when working from your office to improve user experience.

#### Azure Active Directory

Azure Active Directory is a cloud-based directory and identity management service that unifies user accounts for improved security and management. This allows single sign-on (SSO) for staff across their Microsoft and third party services, which removes the need to continually login, as well as allowing self-service password reset (SSPR).

#### Mobile Device Management & Device Deployment

InTune provides mobile device management to allow you to securely manage your mobile devices. Features include the ability to enforce policies across all devices, classify personal and work applications and allow remote device wiping. Windows Autopilot also gives you the ability to remotely build or reset Windows 10 devices to greatly save time and costs and help staff get back up and running without needing to send equipment back.

#### Data Classification

Azure Information Protection gives advanced data protection by allowing you to classify your documents, such as Public, Confidential or Highly Confidential and apply rules based on these categorisations to control your documents. For example, Confidential documents cannot be emailed or printed, or can only be emailed if approved by a manager.

#### Threat Detection

Microsoft's threat detection comes in two versions: Advanced Threat Analytics for on-premise and Azure Advanced Threat Protection for the cloud. Using machine learning, these solutions learn, analyse and detect suspicious activity, alert you if anything unusual is happening on your network and provides recommended next steps.

### GET CERTIFIED

We help organisations gain cybersecurity compliance. This shows your commitment to high levels of information security and is especially important with upcoming GDPR legislation and an increased requirement for official certification. We carry out risk and remediation consultancy to help you gain:

#### Cyber Essentials

Entry-level security standard with a self-assessment.

#### Cyber Essentials Plus

Advanced version of the above with an onsite security audit.

#### ISO27001

The global de-facto security standard and highest level attainable.
